Course Objectives		To introduce the concept of digital and binary systems, number representation and conversion between different representations in digital electronic circuits and to acquire the knowledge of digital logic levels and Boolean logic.								CA407.1	Able to acquire knowledge about fundamental concepts and techniquin digital electronics.				d Understand		
		To make students be able to design and analyse combinational logic circuits.								CA407.2	Able to acquire know structure of various application in digital		umber syst		Underst	and	
		To make students be able to design and analyse sequential logic circuits. Course Outcomes CA407.3 Able to design various combination circuits by understanding and an different primitive combinational different primitive combinational circuits.										nalysing	llysing				
		To understand the concept of Programmable Devices, RAM, ROM, PLA, PAL.								CA407.4	•			ional nalysing	nal

No.	Repro Addit Code												Hours 05	CA407.1,CA407.2			
II	Fund Simp Circu	Boolean algebra and switching functions: Basic Logic Operation and Logic Gates, Truth Table, Basic Postulates and Fundamental Theorems of Boolean Algebra, Standard Representations of Logic Functions- SOP and POS Forms, Simplification of Switching Functions-K-Map and Quine-Mccluskey Tabular Methods, Synthesis of Combinational Logic Circuits.											06	CA407.1, CA407.5			
III	Combinational logic circuits using msi integrated circuits: Binary Parallel Adder, BCD Adder, Encoder Priority Encoder, Decoder, Multiplexer and Demultiplexer Circuits, Implementation of Boolean Functions using Decoder and Multiplexer, Arithmetic and Logic Units, BCD-To-Segment Decoder, Common Anode and Common Cathode, 7-Segment Displays, Random Access Memory, Read Only Memory and Erasable Programmable ROMs, Programmable Logic Arrays(PLA) and Programmable Array Logic(PAL).											10	CA407.1, CA407.3				
IV	Gates Table	Introduction to flip-flops: Basic Concepts of Sequential Circuits, Cross Coupled SR Flip-Flop Using NAND or NOR Gates, JK Flip-Flop Rise Conditions, Clocked Flip-flops, D-Types and Toggle Flip-flops, Truth Tables and Excitation Tables for Flip-flop. Master Slave Configuration, Edge Triggered and Level Triggered Flip-flop, Elimination of Switch Bounce using Flip-flop, Flip-flop with Preset and Clear.											08	CA407.1,CA407.4			
V	Diagi Binar Diagi	Sequential logic circuit design: Introduction to State Machine, Mealy and Moore Model, State Machine Notation, State Diagram, State Table, Transition Table, Table Excitation, Table and Equation, Basic Concepts of Counters and Register, Binary Counters, BCD Counters, Up Down Counter, Johnson Counter, Module-N Counter, Design of Counter using State Diagrams and Tables, Sequence Generators, Shift Left and Right Register, Registers with Parallel Load, Serial -in-Parallel-Out(SIPO) and Parallel-In-Serial-Out(PISO), Register Using Different Types of Flip-flop.												10	CA407.1, CA407.4		
	Digital logic families: Digital IC Terminology, Transistor-Transistor Logic(TTL), Integrated Injection Logic(I2L), Emitter Coupled Logic (ECL), Metal Oxide Semiconductor(MOS) Logic, Complementary Metal oxide semiconductor (CMOS) Logic.												03	CA407.1, CA407.5
