Course Objectives	The Objectives of this course is to explore the principles, algorithms, and data structures involved in the design and construction of compilers.	Course Outcomes	CO1	Specify and analyse the lexical, syntactic and semantic structures of any computer programming language.													
			CO2	Separate the lexical, syntactic and semantic analysis into meaningful phases for a compiler to undertake language translation.													
	CO3		Write a scanner, parser, and semantic analyser for limited form of C like programming languages.														
	CO4		Convert source code in simple language into machine code for a novel computer.														
	CO5		Describe techniques for intermediate code and machine code optimisation.														
	CO6		Design the structures and support required for compiling advanced language features.
