Course Objectives	To introduce students to theory of computation: automata, computability, and complexity with application of mathematical techniques and logical reasoning to important problems,	Course Outcomes	CO1	Student will be able to demonstrate the fundamental understanding of the core concepts in automata theory and formal languages.													
	To develop a strong background in reasoning about finite state automata and formal languages.		CO2	Student will be able to design grammars and automata for different language classes.													
	To introduce students to different ways of parsing a formal language.		CO3	Student will be able to identify formal language classes and prove language membership properties.													
			CO4	Student will be able to prove and disprove theorems establishing key properties of formal languages and automata.													
			CO5	Student will be able to demonstrate a fundamental understanding of computation and computational models including decidability and intractability.

<b>SYLLABUS</b>																	
No.	Content													Hours	COs		
I	Basic Mathematical Objects: Sets Logic, Functions, Relations, Strings, Alphabets, Languages, Mathematical Induction: Inductive proofs, Principles; Recursive definitions.													<b>02</b>	<b>CO1</b>		
II	Regular Languages and Finite Automata (FA), Deterministic and Nondeterministic Finite Automata, Equivalence and minimization of Automata, Finite Automata with output- Mealy and Moore Machines, Properties of Regular Sets: The Pumping Lemma for Regular sets, Closure properties and Decision properties of regular languages, Regular Expressions (RE), Relation Between RE and FA.													<b>14</b>	<b>CO1, CO2</b>		
III	Grammar , Types of Grammar and Languages- Chomsky Hierarchy, Context Free Grammar (CFG), Derivation trees & Ambiguity, Inherent ambiguity, Parse tree, Application of CFG, Simplification of CFG, Normal form of CFG, Relations between classes of languages and Automata, Closure properties and Decision properties of CFG, Properties of Context Free Languages: The Pumping Lemma,													<b>13</b>	<b>CO1, CO2, CO3</b>		
IV	Push Down Automata(PDA), Languages of PDA, Equivalence of PDA and CFG, Deterministic PDA													<b>04</b>	<b>CO1, CO2,CO4</b>		
V	Turing Machine(TM) - Standard Model, Variations of TM (Multi-Track TM, Multi-Tape TM, Multi-Dimensional TM, Universal TM), Deterministic and Non deterministic TM, Turing Thesis, Halting Problem, Language of a Turing Machine- Recursively Enumerable Language, Unrestricted Grammar, Linear Bounded Automata(LBA), Computability and Decidability. Time and Space Complexity, Growth Rate, Complexity classes, Tractable and Non tractable Problems: P and NP, Cooks's theorem.													<b>6</b>	<b>CO1, CO4,CO5</b>		
<b>Total Hours</b>													<b>39</b>
