In the years I've been writing for HowStuffWorks, I've had quite range of assignments. Some are highly technical and send me to a nearby university library for research. Others allow me to draw on life experiences as well as popular literature and websites. None, however, has seemed as strange as this one - Are there really condoms with QR codes? I thought my assignment editor was playing a joke. But a little time online showed me that yes, QR codes have even invaded the bedroom. And that savvy public relations professionals are figuring out all sorts of ways to tap into the latest technology and modes of communication in their efforts to reach young people. My online research led me to a phone conversation with a person who probably knows more than anyone else about condoms with QR codes, and he told me about the good intentions behind what at first seems a bit weird. Every newspaper drips with them, they can be seen in art galleries and shaved into footballer's heads. Obviously someone thinks they're a good idea - yet lots of people seem to get very irate at their very mention. Here's my quick guide to the top ten myths about QR codes.It's true that the most popular use of QR codes is for URLs, but in fact they can contain any type of text. This means that you can use them to send emails, text messages, point out geographic locations, log in to WiFi, or even make a phone call.2. No one is scanning QR codesIt's a popular meme that QR codes are made by over enthusiastic marketing departments despite no one scanning them. Public statistics can be hard to find, but TFL's QR codes in London are scanned by around 10,000 people per month. The QRpedia enabled exhibits in the Miro museum were scanned over 12,000 times.3. Visual recognition will make QR codes obsoleteWouldn't it be great to point your phone at a poster and have it slurp the information off? Well, yes, but it's highly expensive and really impractical. It requires lots of centralised infrastructure and high computing power. There's also the tricky issue of homographic disambiguation - computers find it really tricky to tell the difference between 1!1l| or even 0 and O.4. NFC kicks the arse of QR codesAhhh, NFC. The "cold fusion" of the mobile world. Like cold fusion it will revolutionise the industry and it's merely a few years away! Sadly NFC has been a few years away for the last decade! There are virtually no NFC handsets on the market and the tags are expensive. Almost every cameraphone can have a free QR scanner and the codes are cheap to generate and print.You know how you can scratch CDs and they will still play? They contain error-correction which means that minor defects can easily be ignored. QR codes incorporate the same technology - meaning up to 30% of a code can be damaged or obscured and the code will still be scannable.6. QR codes look boringThere's no need for QR codes to look boring. You can combine a variety of colours and logos into a QR code - just so long as you remember not to obscure the three corner squares. Take a look at these examples:From left to right: France's QR branding at Mobile World Congress; Sky; Red Hot Chili Peppers 7. QR codes can be invertedNo, No they can't. Don't even try this. Some QR scanners will attempt to invert the image, but the majority just won't be able to cope. (opens in new tab)8. You need mobile / WiFi signal to use QR codesWith the advent of WiFi in the London Underground, this complaint has started to dry up. However, nearly every single QR scanner will store the results of a scan so you can access it once you're back in coverage.9. It's really complicated to generate QR codesThere are a tonne of free and easy to use QR generators:ZXingQR StuffQR Generator PHP (on GitHub)10. QR codes are easy to usePerhaps the most contentious one. Because it's so easy to generate QR codes there is a tendency for people to put them to really bad use. QR codes on billboards too high for anyone to scan, codes on motorways when cars are travelling too fast to scan, codes which lead to non-mobile websites, codes hidden behind other objects - the list is almost endless.ConclusionQR codes are on an unstoppable rise - they are being used by businesses both large and small, they're used by activists and individuals, they're on billboards and badges. They're free to use, and customers seem to have taken a shine to them. QR scanners now regularly feature among the top downloaded apps from app stores. So, I say that it's time to embrace QR codes in all their blocky glory. Jump aboard the QR revolution and start scanning! You've probably noticed these around, mainly on advertisements. It's called a QR code, and marketers want you to use your smartphone's camera to "read" it. Here's what you should know about them... and how to make your own!QR (Quick Response) codes are a type of barcode — not unlike the vertically-lined ones on every product you buy — that provide information when read by a scanner equipped to interpret it. They were first used in the mid-90s by a Japanese car manufacturer as a way to keep track of parts, but marketers have begun using them as a fun way to encode and share additional information with consumers, beyond what they can squeeze into an advertisement. (The one shown here is Good Housekeeping's.)After downloading an app (I like QuickMark, but there are a ton of options out there), you use your smartphone's camera to capture the code. You'll then immediately be asked if you'd like to see whatever info the code indicates — it could be a prompt to go to a website URL or to send an e-mail (say, to enter a contest). Marketers are also using them to offer discounts and coupons — a reason it really pays to look for these on ads. Further, tech savvy companies are putting them on employees' business cards, so the contact info can be quickly read and imported into a recipient's cell phone's address book.To create your own, you can use a phone app (QuickMark does this), or go to a QR generator website, such as QRStuff.com or Qurify.com. Some ideas for what you might encode: your contact info, your Facebook profile page URL, or even a Google Map of your house (for a party invitation, for example). Once created, you can save the square code as an image file that you can share or paste wherever you see fit, or you can email or text it to your friends and family (phone apps can also interpret codes sent this way).Have you ever scanned a QR code? What do you think of them? And how might you use a self-created one? Please tell us in the comments below. Opera has just announced another major update is making its way to the Android mobile browser that long ago surpassed 100 million downloads in the Google Play Store. Opera for Android 46 brings a couple of important new features, as well as small improvements worth mentioning like QR code scanning, copy, and paste.The most important new features included in this update – themes and night mode, are now available to everyone owning an Android device and using Opera v46. The new UI themes announced today can be customized by users who can tweak the colors. If you want to take advantage of the new Themes feature, you can find it in the Settings menu.The new Night Mode is exactly what it says, a more convenient way to read late at night. Using the night mode will put less strain on the eyes and enable a more comfy reading in the dark. Night mode Next, private tabs notifications have been implemented to allow those using Opera's private tabs to keep them ... private. The developers have added a small ghost as a reminder of these open private tabs in the notification tray, so when you tap it, it will close all private tabs.A new QR code scanner is now available on the right side of the address bar. Also, you can now tap on the address bar to copy or paste a web address. Finally, at users' request, Opera added an option that allows Android users to disable trending searches suggestions (it's available in the Settings).source: Opera, Google Play Store
